Description

This 2026 Kia EV4 GT-Line S is a fully electric vehicle that has been maintained by only one owner. As a high-specification model, it combines modern design with efficient electric performance, powered by an 81 kWh battery. This setup allows for a maximum range of 380 miles when new, providing significant distance for both daily commutes and longer journeys. Charging is flexible, with a full home charge via a 7kW unit taking 35 hours and 44 minutes, while public rapid charging stations can replenish the battery from empty to 80 percent in just 35 minutes. The GT-Line S trim is equipped with a range of advanced features designed to enhance comfort and convenience. Drivers benefit

from a customisable head-up display and a 360-degree surround view monitor, which assists with parking and manoeuvring. Visibility is improved by LED headlights with an adaptive driving beam, while the cabin feels more spacious thanks to the wide front sunroof that includes both tilting and sliding functions. Comfort is further prioritised with heated front seats, and the vehicle offers a large boot space, making it a practical choice for those who need extra room for luggage or equipment.
